

# Radio Beacon and System Concepts Inc. Deliver RFID Warehouse Management Solution

*RADIO BEACON WMS to integrate with SCI's TraxWare RFID software products*

**Toronto, ON – January 26, 2004** – Radio Beacon Inc., a developer of warehouse management software and System Concepts, Inc (SCI), a leading software solution provider for the \$1.3 billion RFID industry, today announced its plans to integrate the RADIO BEACON WMS with SCI's TraxWare™ RFID software products. This partnership will allow Radio Beacon to integrate its warehouse management software with customers that are leveraging RFID technology in their warehouse.

TraxWare enables Radio Beacon resellers to deploy EPC-compliant RFID solutions, using off-the-shelf hardware from the major RFID manufacturers, without custom software development. TraxWare RFID products reduce risks of operational problems in RFID deployments with easy-to-configure modules and RFID diagnostic tools. The SCI vendor and VAR network will provide regional installation and support for Radio Beacon resellers.

TraxWare is a modular software solution that enables RFID operations between RADIO BEACON warehouse management software and the RFID readers residing at a company's network edge. The architecture is designed for maximum compatibility and interoperability across most RFID tags and readers.

"We are thrilled to be working with Radio Beacon in the smart tag system market," said L. Allen Bennett, SCI President and CEO. "Our partnership leverages the best of both companies and we look forward to adding value for Radio Beacon customers beyond simple EPC compliance."

Specifically, Radio Beacon is integrating:

- PackTrax™ – the TraxWare ControlPoint that enables EPC-compliant pick, pack and smart label solutions. PackTrax is based on Web Services and Microsoft's .NET architecture, and features EPC compliance, RFID data collection and filtering; enables reader intelligence and control; provides interfaces for third-party enterprise systems; performs RFID system analytics, performance, and diagnostics as well as RFID asset management and RFID system administration.
- PackBot™ – this TraxWare EdgeBot enables EPC-compliant portal or portable smart label solutions that manage RFID data collection, filtering, tag reading and writing, and label printing

"This partnership enables Radio Beacon to strengthen its position in the growing RFID market," said Dale Jeffries, President of Radio Beacon Inc. "System Concepts is a strong player in the RFID market and we are pleased to work with them to deliver complete solutions to this unique customer base."

## **About System Concepts, Inc.**

Founded in 1984, SCI provides RFID and AIDC software solutions that enable successful RFID installations in the manufacturing, process control, asset tracking and EPC compliance markets. SCI's solutions leverage the company's RFID expertise and generate a lasting and measurable impact for customers transitioning to RFID technology. The company's flagship product, TraxWare, is deployed in RFID installations at numerous Fortune 100 sites.

**About Radio Beacon Inc.**

Radio Beacon is a developer of warehouse management software that adapts with the growing business needs of third party logistics providers, manufacturers and distributors. RADIO BEACON is the safe WMS choice, extending our customers' accounting systems from companies like Microsoft, Best and Computer Associates to produce high-performance supply chain solutions that deliver accurate and compliant shipments, while improving operational procedures and reducing costs. Radio Beacon solutions deliver a strategic advantage to customers, enabling them to meet the dynamic needs of Tier 1 retailers and major industrial and consumer distributors. Working with industry-leading hardware providers, Radio Beacon's warehouse management software integrates seamlessly with barcode, RFID and material handling technology. Radio Beacon WMS is distributed locally through global partners. For more information, visit [www.radiobeacon.com](http://www.radiobeacon.com).
