

***System Concepts, Inc. announces the completion
of the Social Security Administration's RFID Portal Project!***

High Point, NC - System Concepts, Inc (SCI), a leading solution provider for the \$1.3 billion RFID industry, announces completion of the Social Security Administration's (SSA) RFID Tracking Project awarded in September, 2004. SCI has completed installation and integration of OnPortal™, an integrated RFID scan tunnel, with the SSA's Warehouse Management System from Radio Beacon (www.radiobeacon.com). This is one of the first EPC/DoD compliant RFID installations in the US Government interfaced to their inventory system and it re-affirms the technical leadership that has kept the Social Security Administration at the technical forefront. OnPortal integrates inbound / outbound asset tracking and is comprised of a RFID scan tunnel, SCI's PortalBot™ software product and integrated OnTrax™ RFID edge computer. OnPortal is seamlessly integrated into the SSA's Radio Beacon WMS application and is being used to track inventory as well as generate EDI ASN data for internal and external SSA customers.

The OnPortal system includes SCI's PortalBot software, an OnTrax RFID UHF Interrogator, four custom RFID antennas, photo detector, a 20-character message board, 3-color stacklight and the RFID scan tunnel. OnPortal enables the SSA to ensure quick and reliable EPC compliant asset shipping and receiving.

The Social Security Administration inventories 240,000 line items in three warehouse facilities in Woodlawn, MD and was having difficulties keeping accurate inventory location and shipping transaction records. The agency has been able to save \$700,000 per year by integrating Radio Beacon's warehouse management software and is looking forward to additional annual savings through the use of RFID technology in the warehouse as well as shipping and receiving.

L. Allen Bennett, President and CEO of System Concepts, Inc., is especially pleased to be part of this project and said "It's wonderful to see a government agency striving to save money". Gary Orem of the Social Security Administration adds "We've been working with RFID for years and we are starting to implement solutions that increase operational efficiency and while saving significant taxpayer dollars".

The OnPortal system from System Concepts, Inc. will soon be available to other government agencies under the GSA contract. Please contact the company via email at sales@sysconcepts.com to request more information about OnPortal or other SCI's RFID products.

About System Concepts, Inc.

Founded in 1984, SCI provides RFID and AIDC software solutions that enable successful RFID installations in the manufacturing, process control, asset tracking and EPC compliance markets. SCI's solutions leverage the company's RFID expertise and generate a lasting and measurable impact for customers transitioning to RFID technology. The company's flagship product, TraxWare, is deployed in RFID operations, large and small.
